Analysing Financial Performance Nic La Rosa,2020-12-28 Despite a plethora of techniques to analyse the financial performance of a business, there has been no single methodology that has been overwhelmingly preferred by users. This could be an indication that either the methods themselves are deficient or they are limited by other factors that are not easily overcome. Unlike the current offerings in the field, which focus on issues relating to business performance management or non-financial aspects (such as market efficiency, satisfaction and workforce productivity), this book offers a solution to a major gap in the literature and understanding for those seeking to measure, analyse and benchmark the financial performance of any organisation (for-profit, not-for-profit and government agencies). It clearly identifies why current techniques fail; proposes and evidences a solution that overcomes these issues by including two algorithms that can be combined, to solve this problem; and demonstrates the practical application of the technique to the benefit of users in order to pinpoint real performance levels and insights. One of the largest issues this book will help to overcome is the inability to compare the accounts of businesses/organisations from different countries that report in different currencies. This technique eliminates the need for currency translations and the issues that arise with that process. This book is an invaluable and practical guide to assist accounting and finance practitioners in measuring and comparing financial performance across firms with different business models, different accounting policies and different scales of operations.

Accounting Ratios - English Navneet Singh, Accounting Ratios Accounting ratios, also known as financial ratios, are metrics used to evaluate a company's financial performance, efficiency, liquidity, solvency, and other aspects of its operations. They provide insights into various aspects of a company's financial health and help stakeholders make informed decisions. Here are some common types of accounting ratios: Liquidity Ratios: Current Ratio: Current assets divided by current liabilities. It measures a company's ability to cover short-term liabilities with short-term assets. Quick Ratio (Acid-Test Ratio): $(\text{Current assets} - \text{Inventory}) / \text{Current liabilities}$. It assesses the company's ability to meet short-term obligations without relying on the sale of inventory. Profitability Ratios: Gross Profit Margin: $(\text{Gross profit} / \text{Revenue}) * 100$. It measures the percentage of revenue that exceeds the cost of goods sold. Net Profit Margin: $(\text{Net profit} / \text{Revenue}) * 100$. It indicates the percentage of each dollar of revenue that results in net profit after all expenses are deducted. Efficiency Ratios: Inventory Turnover Ratio: $\text{Cost of goods sold} / \text{Average inventory}$. It measures how many times a company's inventory is sold and replaced over a period. Accounts Receivable Turnover Ratio: $\text{Net credit sales} / \text{Average accounts receivable}$. It indicates

how quickly a company collects its accounts receivable. Solvency Ratios: Debt-to-Equity Ratio: Total debt / Total equity. It measures the proportion of debt and equity used to finance a company's assets. Interest Coverage Ratio: Earnings before interest and taxes (EBIT) / Interest expense. It evaluates a company's ability to pay interest on its outstanding debt. Market Value Ratios: Price-to-Earnings (P/E) Ratio: Market price per share / Earnings per share (EPS). It compares a company's current share price to its earnings per share. Price-to-Book (P/B) Ratio: Market price per share / Book value per share. It compares a company's market value to its book value. These ratios are essential tools for investors, creditors, and management to assess and compare the financial performance and health of a company over time or against its peers.

Financial Accounting - Class 11 - English Navneet Singh, Accounting is a vital aspect of business that involves recording, summarizing, analysing, and communicating financial information. It provides a systematic way to track the financial activities of an organization, enabling stakeholders to make informed decisions. Here's an introduction to the fundamental concepts and principles of accounting: Purpose of Accounting: The primary purpose of accounting is to provide relevant financial information about a business entity to internal and external users. Internal users include management and

employees who use this information for decision-making, planning, and controlling operations. External users include investors, creditors, government agencies, and the public who rely on financial statements to evaluate the financial health and performance of the business.

Key Financial Statements:

- Balance Sheet:** It provides a snapshot of the company's financial position at a specific point in time, showing its assets, liabilities, and equity.
- Income Statement:** Also known as the profit and loss statement, it summarizes the revenues, expenses, and net income (or loss) of a company over a specified period.
- Statement of Cash Flows:** This statement reports the cash inflows and outflows from operating, investing, and financing activities, providing insights into how cash is generated and used by the business.

Accounting Principles:

- GAAP (Generally Accepted Accounting Principles):** These are a set of standard accounting principles, standards, and procedures that companies use to compile their financial statements in the United States. It ensures consistency, comparability, and transparency in financial reporting.
- IFRS (International Financial Reporting Standards):** These are accounting standards issued by the International Accounting Standards Board (IASB), used by companies in many countries outside the United States. IFRS aims to harmonize accounting practices globally.

Double-Entry Accounting: This is a fundamental accounting principle that states that for every transaction, there are at least two accounts involved, with one account debited and another credited. This ensures that the accounting equation ($\text{Assets} = \text{Liabilities} + \text{Equity}$) remains balanced.

Types of Accounts:

- Assets:** Economic resources owned or controlled by the company, such as cash, inventory, property, and equipment.
- Liabilities:** Obligations owed by the company to external parties, such as loans, accounts payable, and bonds payable.
- Equity:** Represents the residual interest in the assets of the company after deducting liabilities. It includes contributed capital from owners and retained earnings.

Revenues: Income generated from the sale of goods or services.

Expenses: Costs incurred in the process of generating revenue.

Accounting Cycle: This is the process that accountants follow to record, analyse, and report financial transactions of a business. It typically includes steps such as identifying transactions, journalizing, posting to ledgers, preparing trial balances, adjusting entries, preparing financial statements, and closing entries.

Auditing: This is the examination of financial statements and accounting records by an independent auditor to ensure their accuracy and compliance with accounting standards and regulations. Understanding these basic principles and concepts provides a solid foundation for anyone interested in learning more about accounting and its role in business operations and decision-making.
